Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the  symbol and shaded () parts are critical for safety.

Replace only with specified part numbers.

Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Use specified internal wiring. Note especially:

- 1) Wires covered with PVC tubing
- 2) Double insulated wires
- 3) High voltage leads

4. Use specified insulating materials for hazardous live parts. Note especially:

- 1) Insulation Tape
- 2) PVC tubing
- 3) Spacers
- 4) Insulation sheets for transistors

5. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

Fig. 1

6. Observe that wires do not contact heat producing parts (heat-sinks, oxide metal film resistors, fusible resistors, etc.)

7. Check that replaced wires do not contact sharp edged or pointed parts.

8. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

Fig. 2

9. Also check areas surrounding repaired locations.

10. Products using cathode ray tubes (CRTs)

In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

11. Crimp type wire connector

In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

1) **Connector part number :** E03830-001

2) **Required tool :** Connector crimping tool of the proper type which will not damage insulated parts.

3) **Replacement procedure**

(1) Remove the old connector by cutting the wires at a point close to the connector.

Important : Do not reuse a connector (discard it).

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

Fig. 5

- (4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

Fig. 6

- (5) Check the four points noted in Fig. 7.

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions. Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table below.

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between B (earth ground, power cord plug prongs) and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between B (earth ground, power cord plug prongs) and exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure and following table.

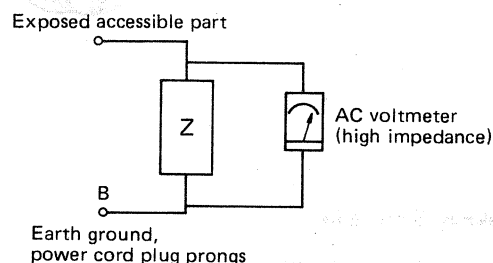

Fig. 9

AC Line Voltage	Region	Insulation Resistance	Dielectric Strength	Clearance Distance (d), (d')
100 V	Japan	$\geq 1 \text{ m}\Omega/500 \text{ V DC}$	1 kV 1 minute	$\geq 3 \text{ mm}$
110 to 130 V	USA & Canada	—	900 V 1 minute	$\geq 3.2 \text{ mm}$
*110 to 130 V 200 to 240 V	Europe Australia	$\geq 10 \text{ m}\Omega/500 \text{ V DC}$	4 kV 1 minute	$\geq 6 \text{ mm (d)}$ $\geq 8 \text{ mm (d')}$ (a: Power cord)

*Class II model only.

Table 1 Ratings for selected areas

AC Line Voltage	Region	Load Z	Leakage Current (i)	Earth Ground (b) to:
100 V	Japan	$1 \text{ k}\Omega$	$i \leq 1 \text{ mA rms}$	Exposed accessible parts
110 to 130 V	USA & Canada	$0.15 \mu\text{F}$ $1.5 \text{ k}\Omega$	$i \leq 0.5 \text{ mA rms}$	Exposed accessible parts
110 to 130 V 220 to 240 V	Europe Australia	$2 \text{ k}\Omega$	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Antenna earth terminals
		$50 \text{ k}\Omega$	$i \leq 0.7 \text{ mA peak}$ $i \leq 2 \text{ mA dc}$	Other terminals

Table 2 Leakage current ratings for selected areas

Note: This table is unofficial and for reference only. Be sure to confirm the precise values for your particular country and locality.

JVC | Instructions

VIEWFINDER VF-P400

For Customers Use:

Enter below the Serial No. which is located on the bottom of the cabinet. Retain this information for future reference.

Model No. **VF-P400**

Serial No. _____

POWER SYSTEM

Connection of power supply

The VF-P400 viewfinder is designed only for connection to the KY-15/20 series color video cameras. Power is supplied from the camera.

WARNING:

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

This unit should be used with 12 V DC only.

CAUTION:

To prevent electric shocks and fire hazards, do NOT use any other power source.

CAUTION

**RISK OF ELECTRIC SHOCK
DO NOT OPEN**

CAUTION: TO REDUCE THE RISK OF ELECTRIC SHOCK, DO NOT REMOVE COVER (OR BACK). NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The lightning flash with arrowhead symbol, within an equilateral triangle is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

Thank you for purchasing the JVC VF-P400 electronic viewfinder.

The VF-P400 has an under-scanned 94 mm (4" diagonal measurement) picture tube for studio use with the JVC KY-15/20 series color video cameras.

To gain maximum benefit from the use of the VF-P400 it is suggested that you study this booklet carefully.

CONTENTS

Features	2
Precautions	2
Controls, connectors and indicators	3
Connection and operation	4
Specifications	6

FEATURES

- Easily mounted onto, or removed from, the KY-15/20 series video cameras.
- Friction tilt mechanism allows downwards/upwards vertical movement; also, left/right horizontal settings are possible.
- Tally lamps provided on the top and front near the CRT.

PRECAUTIONS

- Do not allow inflammables, water or metallic objects to get inside the viewfinder, as this will cause damage or malfunctioning.
- High voltage developed inside the viewfinder is dangerous.

- 2 -

CONTROLS, CONNECTORS AND INDICATORS

- 3 -

CONNECTION AND OPERATION

■ MOUNTING ONTO CAMERA HEAD

1. Turn the VF mount lock lever (A) counterclockwise (↺).
2. Insert the viewfinder from the back of the camera, aligning the mount key with the carrying handle on the Camera.

3. Turn lock lever (A) clockwise (↻) to fix the carrying handle.
4. Connect the viewfinder connection cable to the connector on the camera head. Be careful not to damage key pin of the connector.

- 4 -

■ REMOVING THE VIEWFINDER

1. Turn lock lever (A) counterclockwise (↺).
2. While holding lock release button (B) depressed, slide the viewfinder out toward the back of the camera.

■ OPERATION

- Adjusting the position

1. Tilt and pan the viewfinder head as required. Loosen handle (B) and secure after positioning.

- Attaching the hood

1. Insert the hood in such a way that its front ribs fit over the slot on the front of the viewfinder escutcheon.
2. Secure lock screws (C) after insertion.

- 5 -

SPECIFICATIONS

Input signal	: Composite video, 1 Vp-p, high impedance
CRT	: 94 mm (4") diagonal
Resolution	: More than 500 lines
Tally lamps	: Top; filament lamp (12 V) Screen side; L.E.D.
Power consumption	: 12 V DC, 750 mA (provided from video camera)
Ambient temperature range	: -20°C to +50°C (-4°F to +122°F)
Weight	: 1.8 kg (4 lbs)
Accessory	: Viewfinder hood

Design and specifications subject to change without notice.

Dimensions

Unit: mm

JVC

VICTOR COMPANY OF JAPAN, LIMITED

SECTION 2 ADJUSTMENT PROCEDURE

2.1 POWER SUPPLY VOLTAGE ADJUSTMENT

1. Connect a Digital voltmeter to TP2 on the PS Board.
2. Adjust +9 V ADJ (R204) so that voltage is $+9\text{ V} \pm 0.1\text{ V}$.

2.2 ADJUSTING THE VERTICAL HOLD AND THE HORIZONTAL HOLD

Adjust V-HOLD control (R37) and the H-HOLD control (R56) on the VF Board until picture is in view and locks.

2.3 ADJUSTING THE FOCUS

1. Set the FOCUS control (R104) on the HV Board for best overall definition and picture detail.
2. Reducing the brightness, check to make sure focus is satisfactory at all brightness levels.

2.4 ADJUSTING THE VERTICAL HEIGHT AND HORIZONTAL WIDTH

1. Set the receiving picture to crosshatch or a pattern with which symmetry can be checked.
2. Reduce the vertical size with the V-HEIGHT control (R50) on the VF Board.
3. Adjust the H-WIDTH (L101) on the HV Board so that the picture is just scanned on the screen.
4. Readjust the rotation of deflection yoke and centering magnet so that the picture is just scanned on the screen. Refer to Fig. 2-1.

Fig. 2-1

2.5 ADJUSTING THE LINEARITY AND CENTERING

1. Adjust the H-LIN (L102), V-LIN (R51), H-WIDTH (L101) and V-HEIGHT (R50) so that the picture circle to be circle and just the size in the picture screen.
2. Adjust the centering magnets of deflection yoke to centerize the picture.
3. Adjust the vertical linearity with the V-LINE. control (R51) on the VF Board.

SECTION 3 DISASSEMBLY

3.1 REMOVAL OF TOP COVER

1. Remove two screws (1) on the bottom.

Fig. 3-1

2. Remove two screws (2) on the top cover.
Remove the top cover upwards.

Fig. 3-2

3. Note for tally lamp connector (A) and remove it on the PWB plug.

Fig. 3-3

3.2 REPLACEMENT OF TALLY LAMP

1. Remove two screws (3), then remove the PL board (B).
2. Pull the lamp up from its socket pins.

Fig. 3-4

3.3 REMOVAL OF CRT

Fig. 3-5

1. Remove the top cover as referring to 3.1 REMOVAL OF TOP COVER.
2. Discharge the anode (4) to CRT grounding (C).
3. Remove the anode cap (4) from CRT anode.
4. Remove CRT SOCKET PWB (D) backward.
5. Remove grounding wire (green wire) from grounding terminal screw (5).

Fig. 3-6

6. Remove two screws (6) on the bottom.

Fig. 3-7

7. Remove the connectors (E) and (F).
8. Remove CRT with the escutcheon panel as shown in Fig. 3-8.

Fig. 3-8

9. Loosen a screw (7) and remove four screws (8) with hooks.
10. Remove the CRT from escutcheon panel.
11. Loosen a screw (9) and take off the deflection coil (G).

3.4 REMOVAL OF CIRCUIT BOARDS

Fig. 3-9

1. Remove the connectors (10), (11), (12) and (13) to take off the main PWB (VF Board) (H).
2. Remove two screws (14), then remove POWER SUPPLY Board (PS Board).
3. In case of removing the HV Board, remove the CRT first as referring to 3.3 REMOVAL OF CRT item 1. to 6..

Fig. 3-10

4. Remove the screw (15) and two studs (16), then remove the HV Board.

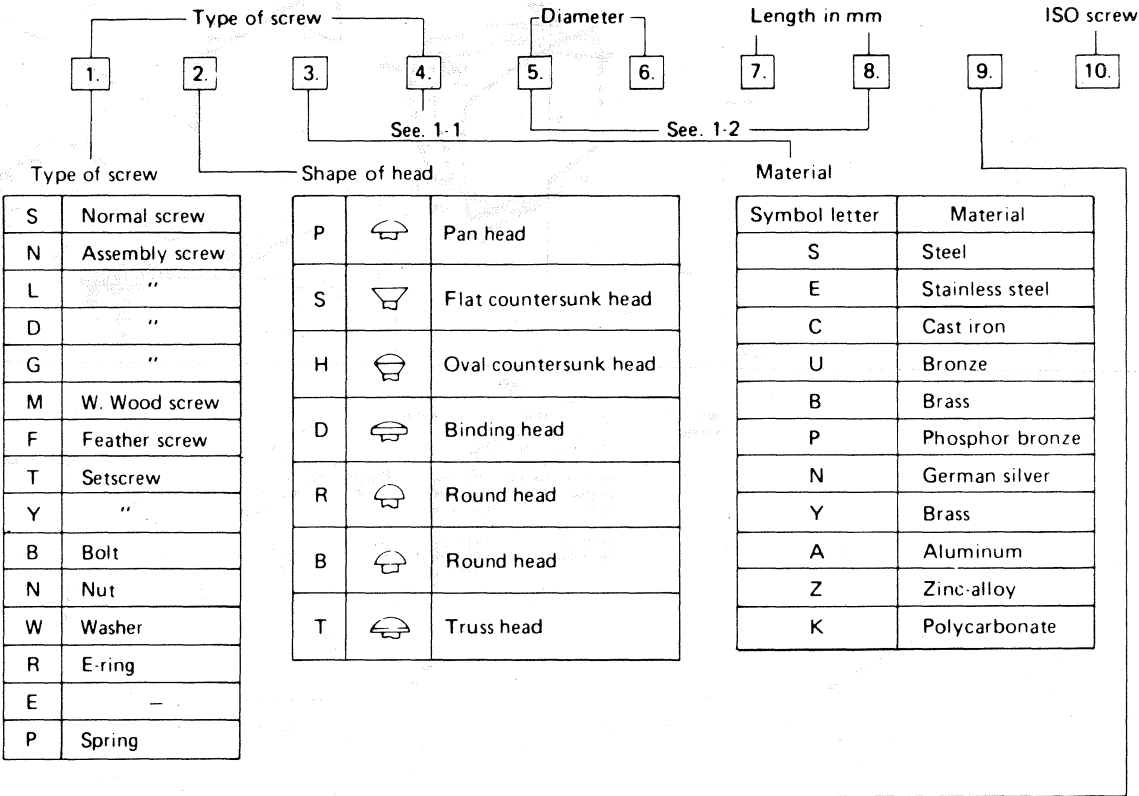

SECTION 4
REPACKING

4.1 REPACKING

SECTION 5
EXPLODED VIEW AND PARTS LIST

Note: Replacing marked Δ parts, be sure to use parts specified for safety purposes.
In this exploded view the part number of the screws and washers designate the type and dimensions* of those items.
The following examples will help you to decipher them.

1-1 Type of screw

P	Cross-Recessed head screw
A	Tapping screw
B	Tapping screw
T	Tapping screw
E	Tapping screw

1-2 Diameter and Length of screw

Surface treatment

Symbol letter	Surface treatment
Z	Galvanization, dichromic acid treatment (MFZn2-C)
N	Nickel plating (MFNi2, MFNi1)
R	Chrome plating (MBCr2, MBCr1)
G	Silver plating (SP4)
W	Nichrome platings
P	Phosphite treatment
B	Bronze plating
M	Black coloring after galvanization
A	Red coloring after galvanization
C	Blue coloring after galvanization
T	Green coloring after galvanization
V	Violet coloring after galvanization
F	Iron with black coloring

5.1 EXPLODED VIEW M1

Note: This model is common with VF-400 (Service manual No. 6389) except the parts 23 and 83 - 92 below.

SECTION 6 SCHEMATIC DIAGRAM AND CIRCUIT BOARDS

6.1 SCHEMATIC DIAGRAM

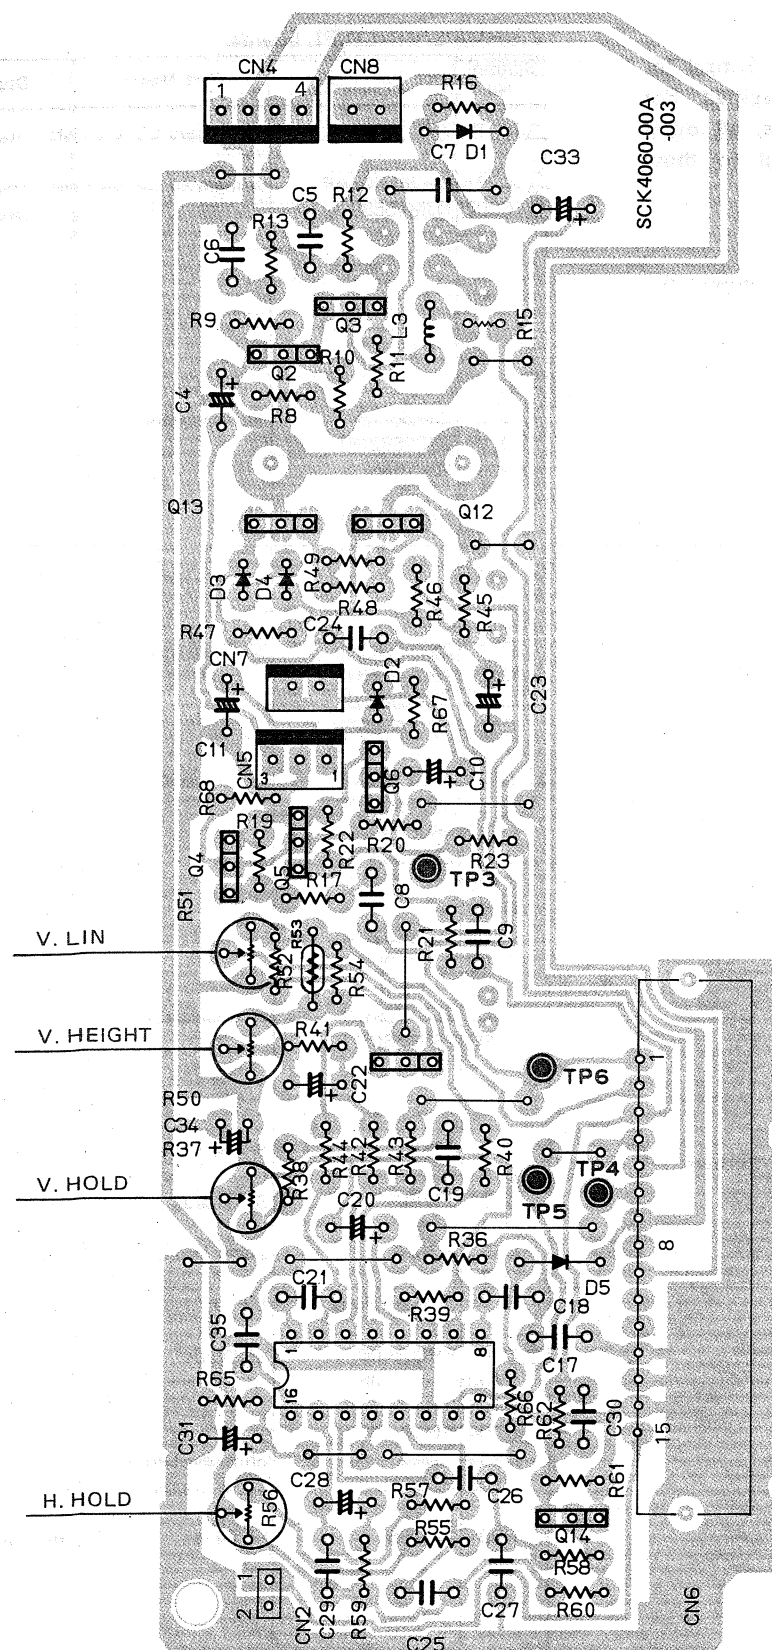

NOTES:

1. Voltage in schematics are DC-measured with a digital voltmeter.
2. Replacing shaded () parts, be sure to use parts specified for safety purposes.

6.2 CIRCUIT BOARDS

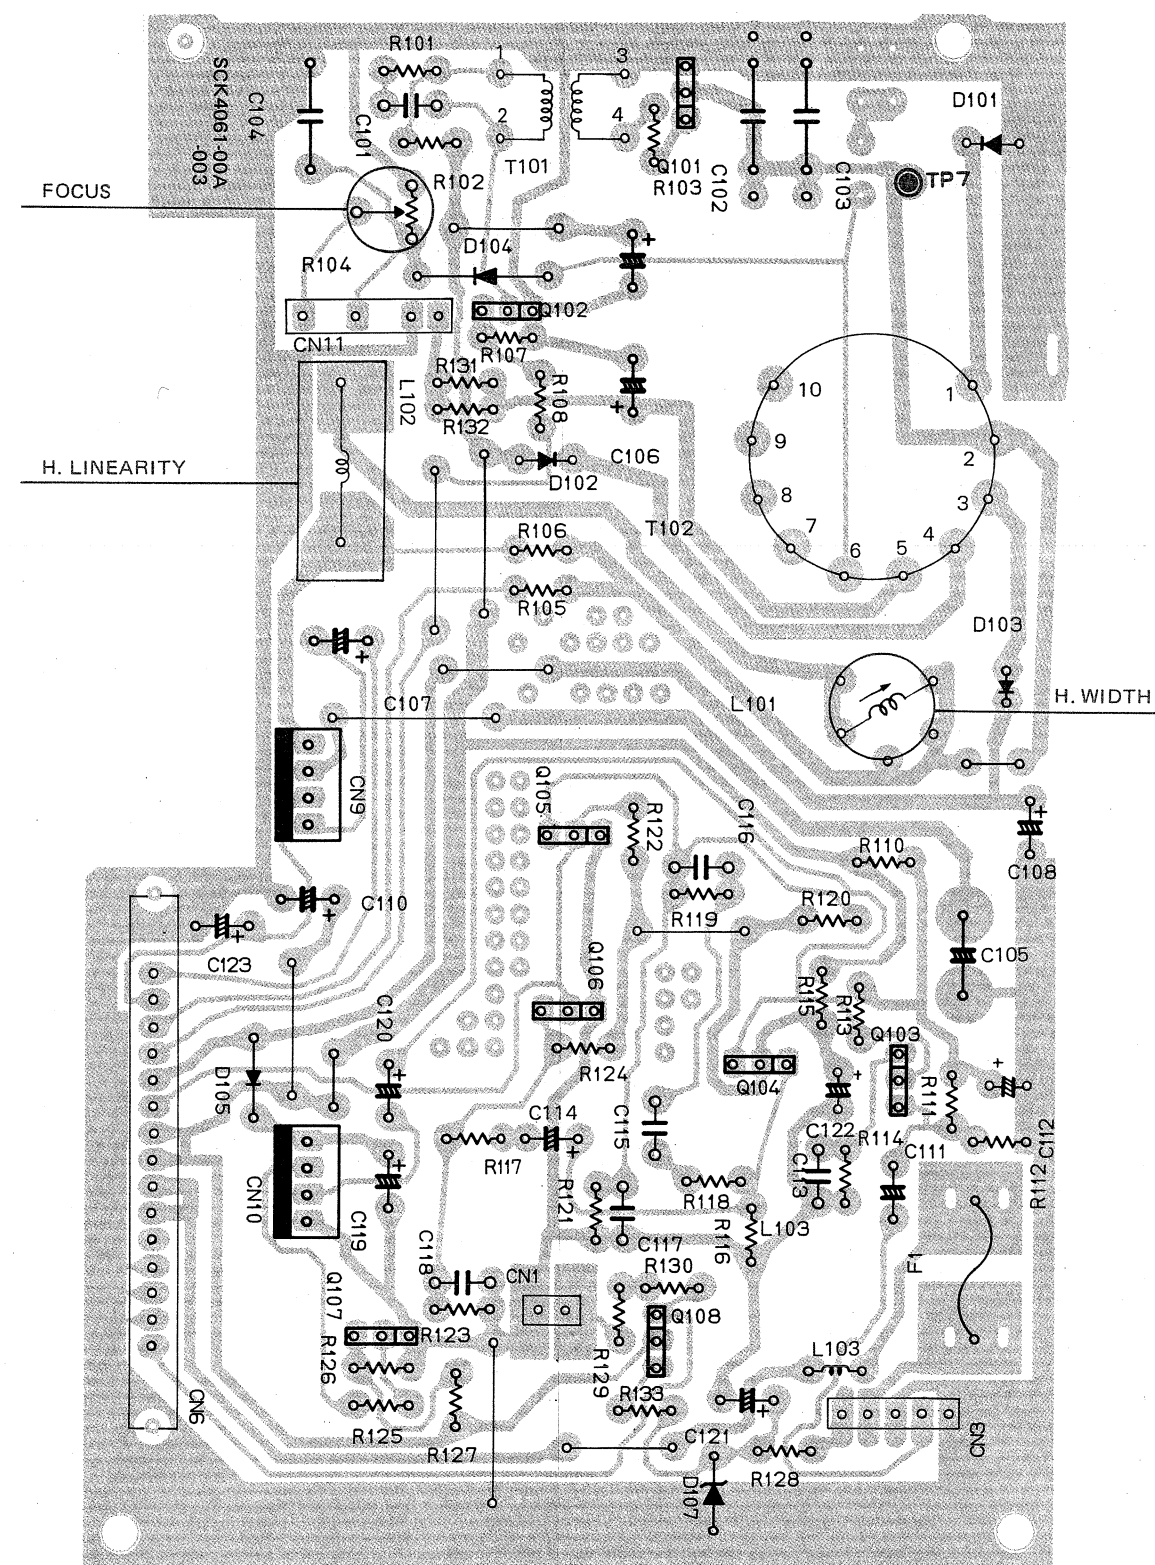

6.2.1 V F circuit board

6.2.2 PS circuit board

6.2.3 HV circuit board

SECTION 7
ELECTRICAL PARTS LIST

1. IMPORTANT SAFETY NOTICE

Parts identified by the Δ symbol are critical for safety. Replace with parts number specified. For maximum reliability and performance, all other replacement parts should be identical to those specified.

2. Abbreviations in this list are as follows:

RESISTORS — All resistance values are in ohms (Ω).

- K : 1 000
M : 1 000 000
CR : Carbon Resistor
Comp. R: Composition Resistor
WR : Wire Wound Resistor
OMR : Oxide Metal Film Resistor
VR : Variable Resistor (Potentiometer)
MFR : Metal Film Resistor
FR : Fusible Resistor
UNF R : Non-Flamable Resistor

CAPACITORS — All capacitance values are in μ F, unless otherwise indicated.

- P : μ F
C Cap : Ceramic Capacitor
E Cap : Electrolytic Capacitor
FM Cap : Film Mica Capacitor
MM Cap : Metalized Mylar Capacitor
MP Cap : Metalized Paper Capacitor
MY Cap : Mylar Capacitor
NP Cap : Non-polar Capacitor
PC Cap : Polycarbonate Capacitor
PP Cap : Poly Pro Capacitor
PS Cap : Polystyrol Capacitor
T Cap : Tantalum Capacitor
TR Cap : Trimmer Capacitor

Tolerances of resistors or capacitors are as follows:

- M : $\pm 20\%$
K : $\pm 10\%$
J : $\pm 5\%$
G : $\pm 2\%$
F : $\pm 1\%$
